

# Project development sprint 1

- Import library and load dataset in python

The screenshot shows a Jupyter Notebook interface with a dark theme. The first cell contains the following code:

```
import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
import seaborn as sns
import sklearn as sk
```

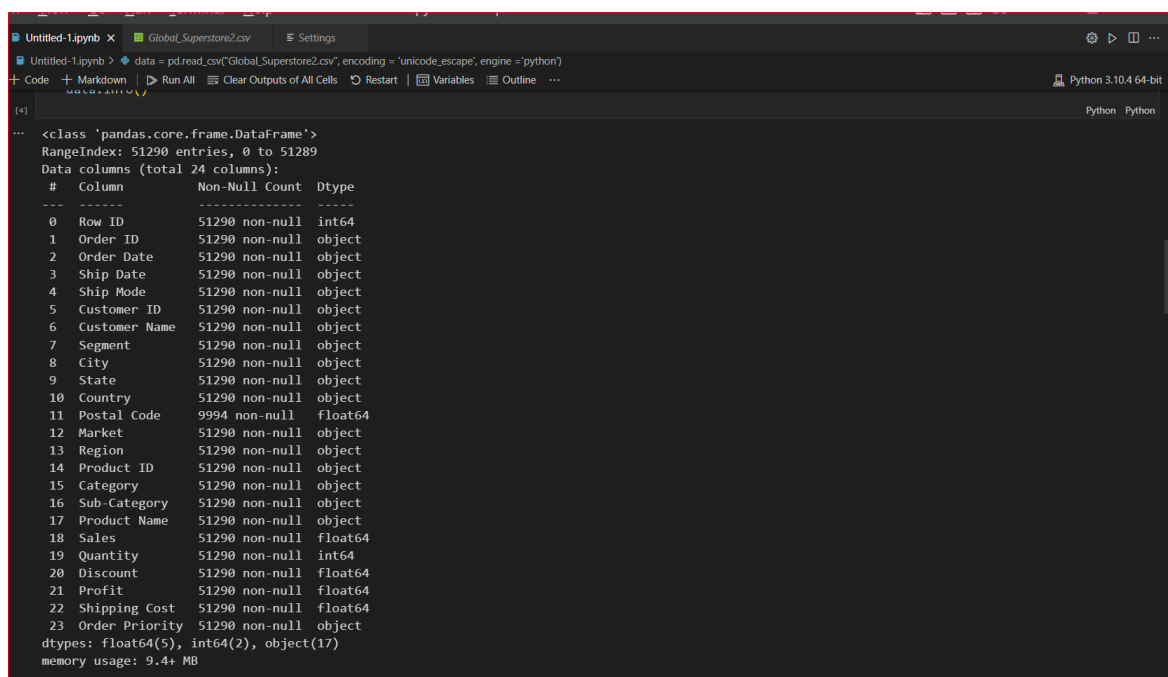

The second cell contains the code to load the dataset:

```
data = pd.read_csv("Global_Superstore2.csv", encoding = 'unicode_escape', engine = 'python')
data
```

The output of the second cell is a preview of the dataset, showing the first four rows of a table with 24 columns. The columns are: Row ID, Order ID, Order Date, Ship Date, Ship Mode, Customer ID, Customer Name, Segment, City, State, Product ID, Category, Sub-Category, Product Name, and Sales.

- Understanding and Analysing the dataset by using python library's.

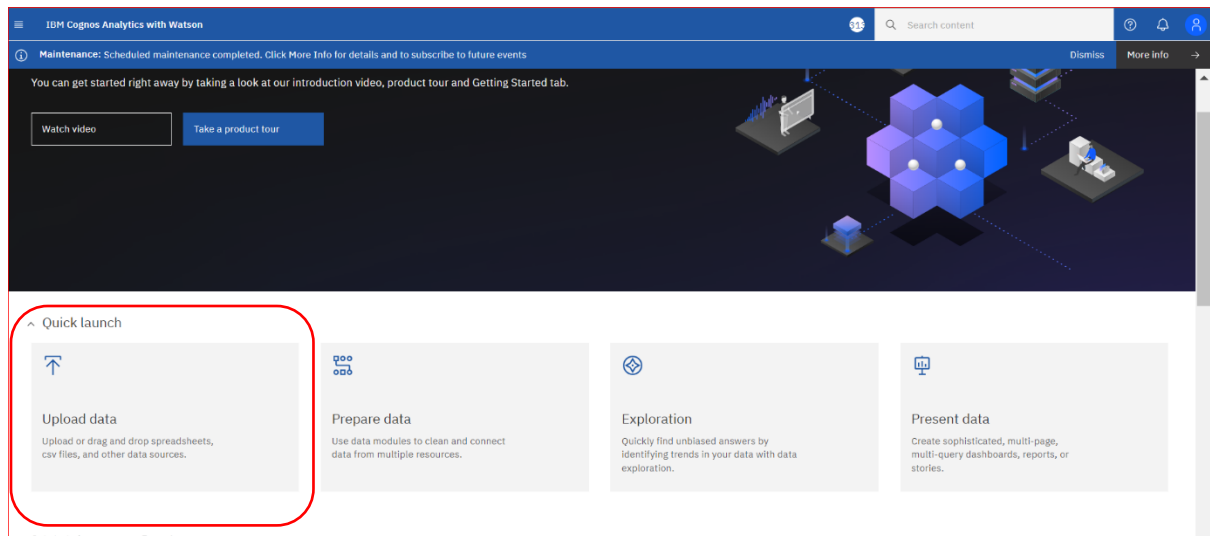

The screenshot shows a Jupyter Notebook interface with a dark theme. The first cell contains the code to load the dataset:

```
data = pd.read_csv("Global_Superstore2.csv", encoding = 'unicode_escape', engine = 'python')
```

The second cell contains the code to display the DataFrame object:

```
<class 'pandas.core.frame.DataFrame'>
